

# North-West Rail Corridor

Queensland's North-West region is one of the world's richest in mineral resources and the world's largest single producer of copper, silver, lead and zinc.

Aurizon operates road and rail services in the North-West, transporting inputs to mine sites and a variety of bulk commodities to the Port of Townsville.

We deliver commodities along the north-west rail corridor including mineral concentrates (bulk and containerised), metals, fuel, fertiliser, sulphur, acids and cement. We have crewing depots in Townsville, Hughenden, Cloncurry and Mount Isa, allowing us to provide flexible services to meet our customers' differing business needs.

The scale of our fleet allows us to offer a reliable and safe service to our customers and our experience means we can meet the challenges of providing bulk freight and logistics solutions for a wide range of customers and commodities.

Major customers in the North-West include Glencore, Incitec Pivot and South32.

System facts.	
Track manager	Queensland Rail
Track axle load	Varies
Track gauge	Narrow (1067 mm)
Track configuration	Majority single
